

ENGINEERING SEMINAR ON PROGRAM MANAGEMENT

SUBJECT EMPHASIS - MANAGEMENT

To stress relationships between the government engineer and the industrial counterpart in the process of procuring end items for government use.

PURPOSE

To increase the effectiveness of the government/industry team.

METHODOLOGY

To trace the role of industry in the procurement process as the government engineer defines his requirement(s), determines the status of the technology, defines and specifies the product to be procured, selects the industrial team composition, and manages the total acquisition. Emphasis will be placed on the assets industry must provide and its sensitivity to government inputs, such as specifications and procurement regulations.

PROCEDURE

The course will be scheduled for approximately 15 sessions, nine of which will be lectures and the balance for case studies, panel presentations and discussions, including two evening semi-formal sessions, culminating in a critique and a test.
